ADDENDUM NO. 01

TO THE

Roofing Project

AT

Davis ATC Machine Shop Roofing Improvements

DFCM Project #05172220

Bid Due Date: Wednesday September 21, 2005

FOR

Division of Facilities Construction and Maintenance

Prepared by

McNeil Consulting Engineering, L.C.

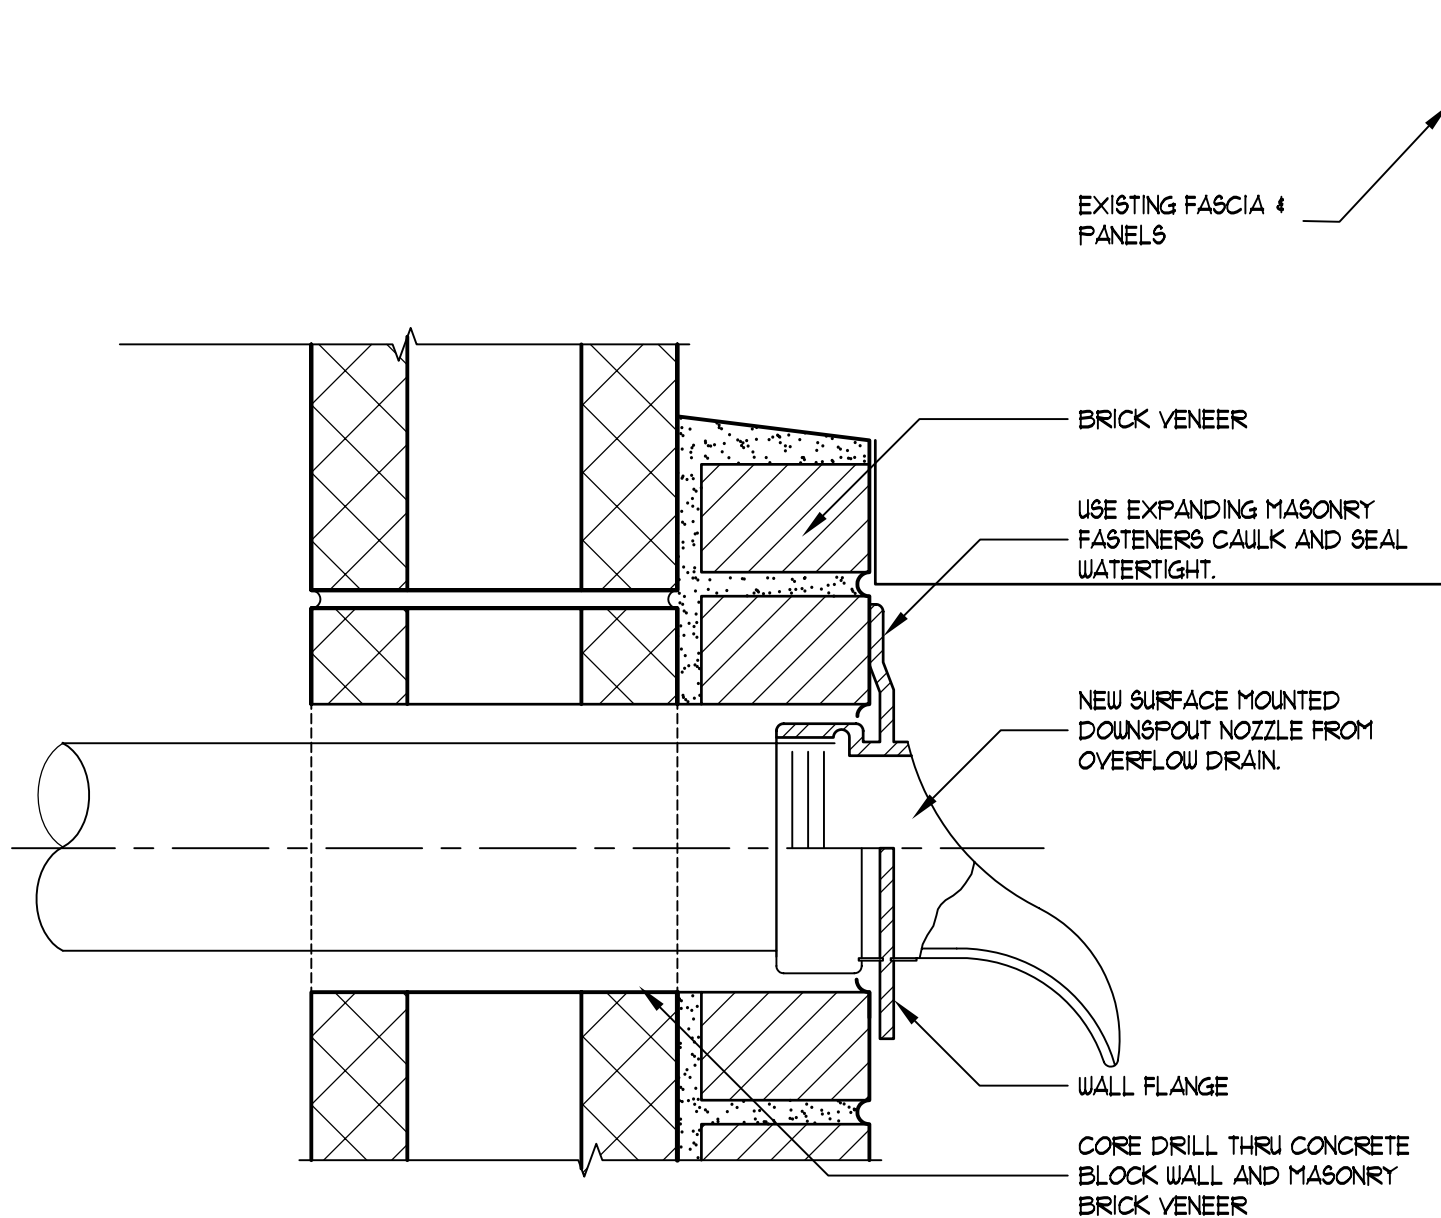

This addendum issued the 16th day of September, 2005 is for all persons preparing bids for the above named project, and as such, shall be made a part of the contract documents.

The addendum consists of this cover sheet and 2 pages. All changes, corrections, deletions, and/or additions to the initial bidding documents enumerated herein shall be included in the bidders proposal. In case of any conflict, this addendum shall govern.

Acknowledgment of receipt of this addendum shall be marked in the appropriate place on the bid proposal form.

This addendum is to be attached to and is to become a part of the specification covering the above noted projects, and the said specification is to apply insofar as consistent with the items hereafter noted:

- ITEM 1: The existing roof insulation is a uniform 4" thick over the entire roof. The thickness of the existing crickets against the wood nailers on the perimeter of the roof is between 9" and 10". The existing concrete roof deck has some slope from the middle towards the outside edges of the roof.
- ITEM 2: The new insulation for the roofing system shall consist of the following:
- 2" Layer of Polyisocyanurate insulation. Minimum "R" Value 12.
 - Tapered perlite insulation. 1/8" per foot slope.
 - 1/2" recovery board for top layer.
 - Perlite crickets will be installed on all perimeters to give positive slope from the outside roof edge back to the roof drains. Slope in these areas will vary. The height of the edge will be constant around the entire perimeter. The slope of the crickets will need to be adjusted to allow for this condition.
- ITEM 3: Four overflow roof drains are to be installed as part of this project. One overflow drain in each corner of the roof.. Exact location will be determined by contractor and project engineer prior to installation. All work is to be completed by a licensed plumbing contractor. All materials, labor and other appurtenances necessary to complete the work on these overflow drains will be part of this contract. Drain size to match the main drains being installed. See attached drawing.
